

1. Generate a pair of public and private keys using RSA tools.( Please send us the public key file, which will be preset to the device during production.)
2. Save the private key file as prikey.txt.
3. Put the prikey.txt and the tool in the same directory.
4. Open the tool and select the program file you want to sign.
5. Click the Create Sign File button to generate a signature file(a sig suffix file).
